

Task 01 – GTM Event Schema for OrthoNow

Objective

Implement a comprehensive Google Tag Manager (GTM) and Google Analytics 4 (GA4) tracking plan for the OrthoNow website to measure user engagement, appointment bookings, lead generation, and marketing performance.

1. GTM Event Schema

Event Name	Trigger Type	Key Parameters (Minimum 3)	GA4 Report / Audience
appointment_step_1_complete	Custom Event (dataLayer)	step_number , clinic_location , specialty , page_location	Funnel Exploration
appointment_step_2_complete	Custom Event (dataLayer)	step_number , clinic_location , specialty , preferred_date	Funnel Exploration
appointment_step_3_complete	Custom Event (dataLayer)	step_number , clinic_location , specialty , booking_status	Funnel Exploration
appointment_booking_success	Custom Event / Thank You Page	booking_id , clinic_location , specialty , booking_status	Conversions
call_now_click	Click Trigger (tel: links)	phone_number , page_location , clinic_location , device_type	Engagement Report
whatsapp_click	Click Trigger (wa.me link)	page_location , destination_url , device_type , clinic_location	Engagement Report
patient_guide_form_submit	Form Submission	user_name , phone_number , guide_name , page_location	Lead Generation Audience

Event Name	Trigger Type	Key Parameters (Minimum 3)	GA4 Report / Audience
<code>patient_guide_download</code>	Link Click (PDF Download)	<code>file_name</code> , <code>guide_name</code> , <code>page_location</code> , <code>download_type</code>	File Download Report
<code>clinic_location_page_view</code>	Page View	<code>clinic_name</code> , <code>city</code> , <code>page_location</code> , <code>page_title</code>	Landing Page Report
<code>blog_scroll_25</code>	Scroll Depth Trigger (25%)	<code>article_title</code> , <code>scroll_percent</code> , <code>page_location</code> , <code>author</code>	Engagement Report
<code>blog_scroll_50</code>	Scroll Depth Trigger (50%)	<code>article_title</code> , <code>scroll_percent</code> , <code>page_location</code> , <code>author</code>	Engagement Report
<code>blog_scroll_75</code>	Scroll Depth Trigger (75%)	<code>article_title</code> , <code>scroll_percent</code> , <code>page_location</code> , <code>author</code>	Content Performance
<code>blog_scroll_100</code>	Scroll Depth Trigger (100%)	<code>article_title</code> , <code>scroll_percent</code> , <code>page_location</code> , <code>author</code>	Content Performance

2. Booking Funnel Tracking

The booking journey consists of three steps:

1. Select Clinic Location and Specialty
2. Enter Patient Details
3. Confirm Booking

To accurately measure funnel drop-off, the **frontend developer** should fire a `dataLayer.push()` after each completed step. GTM listens for these custom events and sends them to GA4.

Step 1 – Select Clinic & Specialty

```
{
  "event": "booking_step_complete",
  "step_number": 1,
```

```
{
  "step_name": "location_specialty_selected",
  "clinic_location": "Indiranagar",
  "specialty": "Knee Replacement"
}
```

GTM Trigger

- Trigger Type: Custom Event
 - Event Name: booking_step_complete
 - Condition: step_number = 1
-

Step 2 – Enter Patient Details

```
{
  "event": "booking_step_complete",
  "step_number": 2,
  "step_name": "patient_details_entered",
  "clinic_location": "Indiranagar",
  "specialty": "Knee Replacement",
  "preferred_date": "2026-07-05"
}
```

GTM Trigger

- Trigger Type: Custom Event
 - Event Name: booking_step_complete
 - Condition: step_number = 2
-

Step 3 – Confirm Booking

```
{
  "event": "booking_step_complete",
  "step_number": 3,
  "step_name": "booking_confirmed",
  "clinic_location": "Indiranagar",
  "specialty": "Knee Replacement",
  "booking_status": "success"
}
```

GTM Trigger

- Trigger Type: Custom Event
 - Event Name: booking_step_complete
 - Condition: step_number = 3
-

3. Funnel Drop-off in GA4

Create a **GA4 Funnel Exploration** using the following events:

Funnel Step	Event
Step 1	appointment_step_1_complete
Step 2	appointment_step_2_complete
Step 3	appointment_booking_success

Example:

Funnel Stage	Users
Started Booking	100
Completed Step 1	74
Completed Step 2	58
Booking Confirmed	46

This allows the marketing team to identify where users abandon the booking process and optimize the highest drop-off stage.

4. Google Ads Conversion to Import

Conversion Event: appointment_booking_success

Why?

This event represents the final business goal—a successfully confirmed consultation. It is a high-value conversion that directly reflects revenue-generating user actions. Optimizing Google Ads for this event provides better campaign performance than using micro-conversions such as phone clicks, WhatsApp clicks, or PDF downloads.

5. Implementation Notes

GTM cannot automatically detect progress inside a multi-step booking form.

The implementation flow is:

1. User completes a booking step.
2. Frontend developer executes the appropriate `dataLayer.push()`.
3. GTM detects the custom event.

4. GA4 Event Tag fires.
5. Data becomes available in GA4 Funnel Exploration for reporting and analysis.
